**IN THE SPECIFICATION:**

1. On page 13, line 3, change "162" to 163.

Base portion 120 includes a removable cylindrical sleeve 156, a removable cover 160, and a receiver 168. Sleeve 156 is configured to slip over the exterior of shaft portion 170, and includes a longitudinal slot 158 that allows access to screw clamps 174 and 176 when sleeve 156 is placed over shaft portion 170. Slot 158 also allows access to a connector 166 disposed in the lower portion of pole portion 115 when sleeve 156 is placed over shaft portion 170. Connector 166 is conductively coupled to the wires from alternate power system charger 162 and solar cells 135. Cover 160 is preferably concave in shape, thereby defining an interior space which may be used to house the electronics (not shown) of power system 150. Cover 160 may include one or more seams [162] 163 that allow access to the interior space defined by cover 160. Receiver 168 releasably receives battery pack 155a. A wire 152 and plug 154 conductively couple battery pack 155a to connector 166, thereby providing an electrical circuit between rechargeable battery pack 155a and light strands 119, 121, 123, and 125 of lighting system 126.
